

DYNASAFE Product Information SCC

SCC – Surveillance and Communication Centre

The SCC is designed for the protection of surveillance and security personnel. It's design also improves and enhances their ability to carry out their tasks.

The construction is a mobile surveillance and communication unit primarily intended to be positioned near possible targets for riots or terrorist attacks such as embassies, government buildings and other objects with a certain protection value.

The SCC has been developed for, and in close collaboration with, a European police force. The unit provides a 360° view as well as protection against firearms, explosions and chemical/biological agents. Furthermore, heating, cooling, ventilation, electricity and equipment for communication and surveillance are available.

The SCC has four individually adjustable support legs allowing it to be located on nearly any type of terrain. The SCC is easily moved between different areas or objects to be protected. At the new location the SCC is immediately ready to be taken into operation.

The SCC is always customized according to the specific demands from the client.
